3rd consecutive year, SSMC won innovative safety award

We are tremendously proud to share that SSMC’s team, “Red Cross”, is the winner of the annual Workplace Safety and Health Innovation (WSHi) Award 2008, one of the most prestigious award given by WSH Council and Ministry of Manpower in Singapore to honor project teams with innovative solutions which improve safety and health in workplace.

The Red cross team has surpassed over a dozen competing teams in manufacturing sector with their innovation in RIE safety cabinet, and brought home the Bronze medal.

This year the winning team, Red Cross, focus on the use an innovative design on a safety cabinet to enhance the overall safety in the FA (failure analysis) laboratory. By inventing a customized container around facility pipping, so that any potential hazardous oil leak will be safety arrested. This solution also provide an ergo-friendly benefit for facility maintenance as well as better administration control. (See picture on below)

Seng Hin, the facilitator has noticed that the achievement has greatly motivated the department. This bronze award has fueled the team to continue their pursue in improving workplace safety. Congratulations to the Red Cross team and keep up with the good work!

- “CONGRATS! You guys are the Stars! This is the third time in a row that your department is winning an award showing the industry how we can have Innovation in our Working environment with an excellence of safety in our mind. Keep up the momentum & be a motivator for others to innovate in SSMC. This is the determination & commitment we need to continue in all area to make workplace safety and innovation a habit.” Jagadish CV, CEO
- “That’s our journey towards Safety Excellence. We’re glad our Red Cross team can use this opportunity to promote the importance of workplace safety & innovation internally in SSMC as well as to the national level.” Tan Seng Hin, Failure Analysis manager.

Potential oil leak causing hazards

Cabinet provides round the clock protection to contain potential leak

Ergo-friendly Maintenance control

Year after Year, Our Journey to Safety Excellence
