

TAKING INITIATIVE

INTERNS @ SSMC –“Design Thinking” & “An Eye-Opening Experience”

Interns play a key role in forming a source of our talent pipeline for the future. As a one of the world's best-in-class providers of semiconductor wafer fabrication and foundry services, SSMC offers students a chance to work in a safe and structured environment, gain quality and professional work experience by working alongside with our experts. Also, they have plenty of opportunities to apply their ideas to their assigned projects outside classroom knowledge and theory. Read the reflection of 2 of our university students who shared their internship journey with us.

Ivan Lim, Intern@ SSMC (Quality & Reliability Assurance) | Nanyang Technological University

Through my 5-month internship in SSMC made me realize the importance of teamwork and communication. It was an eye-opening experience working in one of the leading foundries in the industry. Working in the lab requires me to work together with my colleagues and doing so allows me to convey my ideas to them clearly. This has definitely challenged me and made me grow as a reliability engineer.

Toh Qian Ning, Intern@ SSMC (Marketing) | National University of Singapore

I am very grateful for the rare opportunity to be Marcom intern at SSMC. I have gained many valuable experiences working in a semiconductor manufacturing company and also cultivating many new skills such as social media, videography. I have adopted best practice in design thinking and technical marketing and research skills; also learnt to be more independent and disciplined.
